

Link News 2017

Easy online distribution with WebCops Secure Download.

DVDR-Cops ULTRA, safe - still on your own DVD-Rs.

You know some of our products - but we do many other things. The new DVDR-Cops ULTRA has an approval rate of almost 100% - yet you still produce on your own PC on normal DVD-Rs.

Secure Download is a complete system for moving new and existing titles to safe online distribution. In most cases it can be done without involving the original developers!

It is easy to use and works on old and new Windows and macOS. Installing a product requires internet access only during the first run. Even without internet, products can be activated by reading a QR-code on a smartphone or by entering a code.

NEW Boss: Thomas Hindberg is our new CEO! He is 28 years old, educated as it-engineer from Technical University of Denmark and Copenhagen Business School with focus on Internet and Economy. He has worked here part time many years. Former CEO Hans Pedersen will now focus on research and development, while being the Chairman of the Board.

Testing House: We do testing for publishers in connection with protection jobs. Knowing what to test and how to judge anomalies and get around cache problems requires skills and experience. We can also offer testing as a separate service.

Best regards,

Link Data Security

Link Data Security invented the world's first DVD-ROM protection in 1998 - still one of the best in the world! All know-how from our CD/DVD, USB-stick and network protections is in our Secure Download system which boasts millions of active users. Our security is well-tested and chosen for demanding purposes; in 2016 the Japanese Ministry of Defense started using us on a regular basis.
